

ZHIQIANG XU 

(Junior Full Stack Java Developer)

To

Verizon

Dear Verizon Hiring team,

When I heard about the program Verizon was offering as an apprenticeship, it filled me with excitement and anticipation to know that I could have the opportunity to work for Verizon. Every time I came across a Verizon commercial, I imagined I could work at Verizon one day. This feeling has continued to this day, and I want to make it happen.

Cloud Computing work, different computer operating systems, different programming languages, security networking and database operations. I try to learn more. These techniques that I knew help me to communicate with computers will allow me to communicate with the world. Just like Verizon's 5G makes the world more connected.

I spent four months interning as UX designer where I learned how to communicate and collaborate with different roles in the team. I had to interact with developers, users, and stakeholders alike. I often found myself taking the role of team leader in the class. That related experience gave me a clearer of the challenges businesses face daily. Everyone one has a different role in a project. I brought my ability to retain the space to think about projects uniquely, and that has kept my innovative.

Thank you for your time and consideration. My work experience, coupled with my innovation, expansive mindset, and open personality allows me to consistently deliver for all my projects. There is no doubt I would be a valuable asset to Verizon. I look forward to the opportunity to expand my knowledge with the Verizon team.

I can be easily reached at your convenience by email (chichanhsu0627@gmail.com) or by telephone (469-862-7882). There is other more information I would like you to visit
